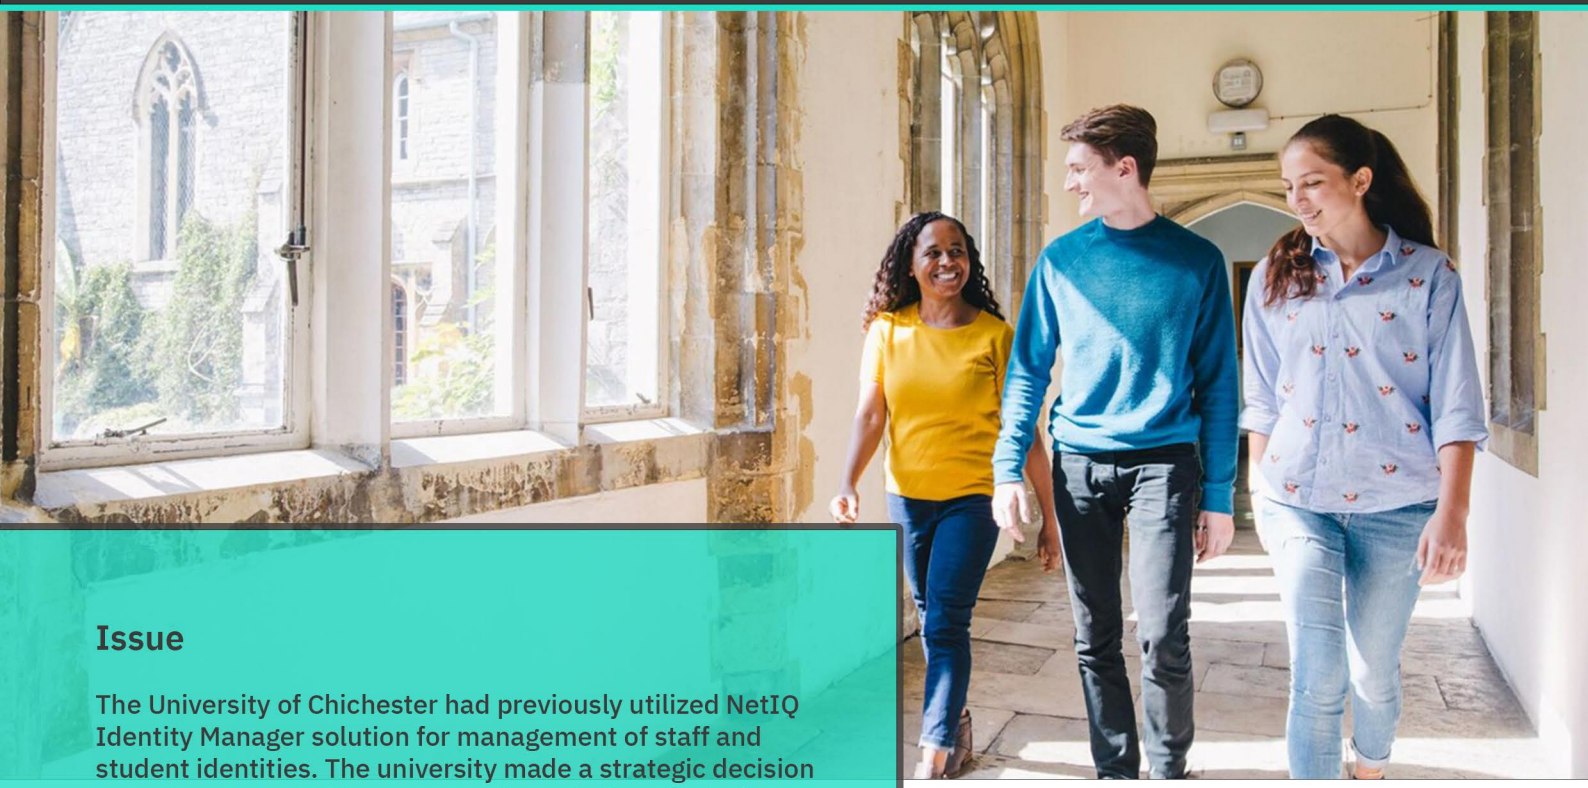
ideiio

UNIVERSITY OF CHICHESTER

Case Study



Issue

The University of Chichester had previously utilized NetIQ Identity Manager solution for management of staff and student identities. The university made a strategic decision to replace NetIQ with a more modern platform in the face of rising support costs with the aim of simplifying the infrastructure and identity lifecycle workflows for its joiners, movers and leavers.

Solution

The university selected the ideiio Identity Governance and Administration (IGA) platform for its simple, secure and cost-effective identity lifecycle management capabilities. By linking HR, Student Records and IT systems ideiio enabled a single source of truth for staff and student information simplifying provisioning and ensuring only the right people have access to the right systems at the right time, meeting the university's future needs.

Benefit

Due to the benefits of out-of-the-box workflows and ideiio's availability as a SaaS, on-premise or hybrid solution, both integration and deployment were quickened enabling implementation to be planned in the small timeframe outside of term time, when activity would be at its lowest.

Why choose ideiio?

Small IT Teams
ideiio is built to be simple and quick to configure and deploy

Quick Value
ideiio's SaaS deployment allows quicker realisation of value

Cloud First
ideiio is a SaaS platform which can be managed fully from the cloud

Process Simplification
ideiio's out-of-the box features meet the vast majority of use cases

Delegation
ideiio's delegation allows users from across the organisation to manage identities
